Should be required in every nursing school!By Alane RNI can't believe I got through nursing school without being taught this important information about blood collection. I worked in a fast-paced ED and had no idea why we rocked the tubes (some tube interiors are spray-coated with an additive and the blood needs to have contact with that additive), which color tube should be rocked how many times, etc. Worse, my instructor has been a venipuncture specialist for decades and says she couldn't believe how much was news to her in this book. It's clearly written and concise, too.1 of 1 people found the following review helpful.
