From Sue Raine : Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation before purchasing it in order to gauge whether or not it would be worth my time, and all praised Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation:

1 of 1 people found the following review helpful. Not enough practical explanation By lessteel I had an original Bobath text book in PT school but have misplaced it. I now have a CVA patient and wanted to review the techniques. While

this text is good on theory it does not break down the techniques as well as the original Bobath text did in my opinion. Would have liked a more sequenced approach with easy to understand flow of the techniques utilized. 0 of 0 people found the following review helpful. Five Stars By Customer Great textbook with illustrations and a good build-up! 1 of 1 people found the following review helpful. Amazing Content By David Sloan WOW! This is a great book. It does a great job of overviewing the Bobath work both past and present. It can be a little "wordy" and hard to grasp some concepts but once you do it is amazing. I think it is a must read for any healthcare practitioner interested in neurological rehab.

Authored by members of the British Bobath Tutors Association, *Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation* is a practical illustrated guide that offers a detailed exploration of the theoretical underpinning and clinical interventions of the Bobath Concept. This book guides the reader through general principles to more specific application of neurophysiological principles and movement re-education in the recovery of important areas, including moving between sitting and standing, locomotion and recovery of upper limb function.

"An invaluable reference." (International Journal of Therapy and Rehabilitation, March 2010) From the Back Cover Authored by members of the British Bobath Tutors Association, *Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation* is a practical illustrated guide that offers a detailed exploration of the theoretical underpinning and clinical interventions of the Bobath Concept. The evolution of the Bobath concept is brilliantly captured in this volume. The recognition that the best inhibition may come from engaging the patient in normal activities is an example of the way one of the notions central to the original Bobath Concept has developed. In short, the Bobath Concept lies at the heart of an approach to neurorehabilitation that is ready to take advantage of the rapidly advancing understanding, coming from neuroscience, of brain function in, in particular, of the effects of and responses to damage, and the factors that may drive recovery. It is no coincidence that neuroplasticity figures so prominently in the pages that follow. Emeritus Professor Raymond Tallis BM BCh BA FRCP FMedSci LittD DLitt FRSA This book guides the reader through general principles to more specific application of neurophysiological principles and movement re-education in the recovery of important areas, including moving between sitting and standing, locomotion and recovery of upper limb function. *Bobath Concept: Theory and Clinical Practice in Neurological Rehabilitation* will be invaluable to undergraduate and qualified physiotherapists /occupational therapists and all professionals working in neurological rehabilitation. Covers the theoretical underpinning of the Bobath Concept. Presents a holistic, 24-hour approach to functional recovery. Focuses on efficient movement and motor learning, to maximise function. Forges links between theory and clinical practice. Illustrated throughout. About the Author Sue Raine is Clinical Lead Physiotherapist at Walkergate Park for Neurorehabilitation and Neuropsychiatry, in Newcastle-upon-Tyne, and an experienced Bobath Tutor. Linzi Meadows is Clinical Director of the Manchester Neurotherapy Centre and Neurological Teaching Centre, as well as an Advanced Bobath Tutor. Mary Lynch-Ellerington F.C.S.P is Fellow of the Chartered Society of Physiotherapy and a Senior Bobath Instructor.
