Dr. Mark S. Dworkin : Cases In Field Epidemiology: A Global Perspective before purchasing it in order to gage whether or not it would be worth my time, and all praised Cases In Field Epidemiology: A Global Perspective:

1 of 1 people found the following review helpful. Vignettes Show Lessons for Future EpidemiologistsBy Aaron F.Dr. Dworkin really loves this book!The absolute only way to take his class (EPID 594 Advanced Special Topics: Outbreak Investigation) is to read every chapter of this book.Unlike most textbooks, this textbook is a compilation of vignettes and each chapter teaches specific lessons.This book is more storybook-like than textbook and is an enjoyable read.The authors of each chapter were the guest lecturers in our class, which made this book even more relevant.If you are taking Professor Dworkin's class, this is not a text book to skip buying! No pages is left unread.0 of 0 people found the following review helpful. Taking Dworkin's class was amazing. The stories in this textbook were detailed just ...By maeTaking Dworkin's class was amazing. The stories in this textbook were detailed just in couple of chapters. It is not a generic textbook, but a field epi investigative book where you learn about real life experiences. We got to meet some authors in this book and let's say seeing their enthusiasm for the work they do shows in their writings.2 of 2 people

found the following review helpful. Very approachable By Joe in Chicago Easy to follow and well structured. The book makes epidemiology accessible even to those coming from a nontechnical background. Great.

This collection of case studies--some never before published--uncover the details of actual disease outbreaks from within the United States and around the world. At the conclusion of each chapter, the investigator reviews the methods and processes that were employed to execute the investigation. Ideal as a complement to any text on infectious disease epidemiology, these case studies will bring to life the classic functions of field epidemiology and the application of epidemiological methods to unexpected health problems that require fast, on-site investigation and timely intervention. The cases cover investigations in infectious and non-infectious disease outbreaks, as well as environmental health related disease outbreaks. Included are illustrative outbreaks and investigations of Ebola hemorrhagic fever, anthrax, botulism, cholera, AIDS, syphilis, yellow fever, mumps, whooping cough, measles, toxic shock syndrome, ammonia poisoning, aflatoxicosis, eosinophilia myalgia syndrome, cancer clusters, thallium poisoning and more, all told as first person accounts that reveal the application of epidemiology and related concepts along with lessons learned.
