**From Brand: Oxford University Press : Cataract Surgery and Intraocular Lenses: A 21st Century Perspective (American Academy of Ophthalmology Monograph Series)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Cataract Surgery and Intraocular Lenses: A 21st Century Perspective (American Academy of Ophthalmology Monograph Series):

Although this monograph carries the label of Second Edition, it is an entirely new monograph that examines the

modern and future practice of cataract surgery. It includes detailed descriptions of such novel modalities as laser photolysis, the electromagnetic technique, and endocapsular vortexemulsification. It also covers promising innovations in intraocular lenses-multifocal and toric IOLs-in the search for lenses that will solve the problem of accommodation. These new innovations are placed in a historical context through an appendix offering a glimpse at the often colorful history of IOLs. An overview of the fundamental topics underlying clinical practice-the anatomy and physiology of the crystalline lens, the evaluation of a patient for cataract surgery, and the classification of types of cataracts-makes this monograph a succinct yet comprehensive resource for practitioners.

About the Author Jerry G. Ford is at Wake Forest University Eye Center. Carol L. Karp is at Bascom Palmer Eye Institute, University of Miami School of Medicine.
