Lucio Buratto MD, Stephen Brint MD, Luigi Caretti MD : Cataract Surgery in Complicated Cases before purchasing it in order to gauge whether or not it would be worth my time, and all praised Cataract Surgery in Complicated Cases:

Cataract Surgery in Complicated Cases offer the latest techniques in treating complicated cases as faced by today's surgeons performing cataract surgery. Dr. Lucio Buratto; Dr. Stephen Brint; and Dr. Luigi Caretti provide step-by-step approach to facilitate how to assess the patient, perform the technique, and manage the most challenging cataract surgery complicated cases facing both beginning and experienced surgeons. Cataract Surgery in Complicated Cases covers a wide variety of topics including cataract in high myopia, floppy iris syndrome, traumatic cataract, phacoemulsification with a small pupil, and IOL explanation and replacement. Supplemented by more than 250 color

illustrations, diagrams, a glossary, and references, all surgeons, from beginner to expert will want this unique resource by their side.

What stands out is how the book manages to be understandable for beginning residents who want to familiarize themselves with the many considerations involved in cataract surgery, while providing adequate detail for more seasoned surgeons who seek to broaden their skill set for these complex cases. The visual aids are a particular strength. This book could become the sort of staple that anterior segment surgeons have as part of their personal library. The readers who would appreciate it the most are beginning ophthalmology residents and comprehensive ophthalmologists who have less experience with these difficult cases. - Sarah Johanna Wehrli, MD, Northwestern University Feinberg School of Medicine, Doodys Service
