to review question, if you are senior in your program I highly recommend to purchase the COA and COT books too it really helps with your grades in school and COMT certification.

The Basic Bookshelf for Eyecare Professionals is a series that provides fundamental and advanced material with a clinical approach to clinicians and students. A special effort was made to include information needed for the certification exams in ophthalmic and optometric assisting, low vision, surgical assisting, opticianry, and contact lens examiners. The Certified Ophthalmic Medical Technologist Exam Review Manual is a review book designed for those preparing for the COMT certification exam. This manual offers some 600 multiple-choice questions on every topic listed in the test criteria, including advanced levels of tonometry, visual fields, color vision, clinical optics, motility, photography, pharmacology, and general medical knowledge. Material that is unique to COMTs, such as microbiology and special instruments techniques, are also covered. Explanatory answers, often with supporting illustrations and tables as well as the reference from which the material was obtained, are offered to round out your study experience. Suggested study texts are listed, along with an appendix on how to take a practical examination.

"This text is written in an orderly progression, beginning with an introduction to pharmacokinetics and pharmacology the writing style is consistent and the chapters follow similar layouts illustrations do serve to clarify particular concepts numerous tables serve to encapsulate the text are very useful for quick reference as the name states, this would be appropriate for a course in pharmacology, would meet BOC guidelines for this competency, and is complete enough to be the sole text for such a course this text could serve as a reference for the athletic training room and would be very helpful in establishing procedures for the storage and dispensing of medications...a well written reasonably priced text...as drugs come to the forefront in athletics and athletic trainees deal with an ever-widening cross-section of the population, the information contained in this text will be invaluable to all athletic trainers." John Miller, PhD, ATC, Journal of Athletic Training
