Chapman and Nakielnys *Aids to Radiological Differential Diagnosis* has become a classic resource for trainees and practitioners worldwide, to hone their knowledge of radiological differential diagnosis for the most commonly encountered conditions throughout the body. It is an invaluable quick-reference companion in everyday practice, as well as an essential study tool when preparing for the FRCR or similar examinations. This new edition is thoroughly revised and updated in line with latest clinical practice, knowledge and guidelines. The first section presents lists of differential diagnoses, supplemented by notes on useful facts and discriminating factors. These assist with the systematic assessment of radiographs and images from other modalities. The second section offers detailed summaries of the characteristic radiological appearance of a wide range of clinical conditions. New to this edition is complementary access to the complete, fully searchable eBook, making it even more practical to use than ever before, anytime, anywhere! "Although very much thought of an examination primer this will be useful for reporting radiographers and radiologist alike. This is a useful, pocket-sized book that is quick to reference and well-priced." Reviewed by: Joanne Sil, Radiography admissions tutor, University of Salford, Manchester - RAD Magazine Date: Sept14 Lists of differential diagnoses. Notes on radiological appearances. Ideal for preparation for radiological examinations. Now comes with full access to the complete eBook version via Expert Consult! Contents revised and reduced to reflect current radiological practice. Existing lists modernised to reflect modern imaging practice, particularly where technological advances have been made. Revised to take account of new imaging guidelines. Journal references updated. Increased number of diagrams.

"Although very much thought of an examination primer this will be useful for reporting radiographers and radiologist alike. This is a useful, pocket-sized book that is quick to reference and well-priced." ed by: Joanne Sil, Radiography admissions tutor, University of Salford, Manchester - RAD Magazine Date: Sept14 *Aids to Radiological Differential Diagnosis* does exactly what it claims. The new edition is thoroughly revised and updated and now contains an extensive paediatric chapter. In particular, it will form an extremely popular companion to the film viewing section of the FRCR Part IIB examination in the UK. It is a book that I intend to keep close at hand. Joanne Driver, RAD Magazine, December 2009
