Neil J. Davies DC Cert Clin Chiro Paeds FICC FACC : Chiropractic Pediatrics: A Clinical Handbook, 1e before purchasing it in order to gauge whether or not it would be worth my time, and all praised Chiropractic Pediatrics: A Clinical Handbook, 1e:

7 of 8 people found the following review helpful. Best pediatric book in the universe By Chen Neil Davies has written a fantastic pediatric book for chiropractic. He uses the current literature to support chiropractic treatment for children. He has involved a wide range of professionals and discusses the importance of maintaining a healthy child. I highly recommend this book and it is definitely one that you will always refer to...keep it handy! 4 of 4 people found the following review helpful. An essential text for all DC's By Dr Yates A well researched, very accurate and informative reference/text book which is essential for any chiropractor who sees more than about 1 kid per year. Would enlighten most MD's, paediatricians, nurses and physiotherapists taking care of children on a regular basis.

Chiropractic Pediatrics looks at all aspects of paediatrics which are of concern to chiropractors and relates them to clinical chiropractic management. It provides comprehensive coverage of the common paediatric syndromes which may present to the chiropractor and outlines the related history-taking, physical assessment, diagnosis and management for each syndrome. It provides a unique, evidence-based approach to the chiropractic management of children's conditions, making it an essential reference source for both chiropractic clinicians and students. Describes the pathology of the paediatric conditions most commonly encountered by chiropractors. Presents unique chiropractic management paradigms. Offers a new approach to the identification and correction of extremity subluxations in children. Gives precise descriptions of age-modified techniques. Includes detailed, age-specific subluxation assessment protocols. Lists indications for referral for non-chiropractic management. Includes contributions from other professions involved in the management of children's conditions (rheumatology, clinical psychology, paediatrics)
