From LWW : Duane's Ophthalmology on DVD-ROM before purchasing it in order to gauge whether or not it would be worth my time, and all praised Duane's Ophthalmology on DVD-ROM:

Sharp The online site, for which you will receive a year's subscription, was not functionally navigable from my blackberry device (Blackberry Bold, accessed from the UK) - bang goes your idea of coming up with that satisfying rare diagnosis in Friday afternoon teaching. In my opinion, the online advertising for the subscription did not make it clear enough that even though the online site is updated quarterly, there does not appear to be a way to update your offline version. This means that presumably as soon as your year's subscription ends

you will be back to the old version, unless you pay the significant amount required for another year's subscription. Perhaps it was not fair for me to have assumed that offline updating would be available.[...] displays a thumbnail of 'Wills Eye Video Atlas of Ocular Surgery', which when clicked prompts you to insert your login details. It was only when I had shelled out more than 100 pounds for Duane's online access that I discovered that there appears to be only 15 videos or so. The top of the page has a link to the Lippincott Williams and Wilkins website where you can pay 399 dollars to purchase access to over 100 videos. One of the reasons that I purchased the Duane's online access was because I thought I would be getting access to these videos, so it was a great disappointment to find out that this was not the case. I would still recommend this product if you appreciate the impressively comprehensive and high quality writing style of Duane's, but you should be aware of the hobbled delivery method, and in my opinion, somewhat misleading description of what is included. I submitted the above review to the Editors, who apparently agreed with my comments and are 'working to correct the issues within the product.'
