Elizabeth C. Ward and Angela Morgan : Dysphagia Post Trauma (Clinical Dysphagia Series) before purchasing it in order to gage whether or not it would be worth my time, and all praised Dysphagia Post Trauma (Clinical Dysphagia Series):

0 of 0 people found the following review helpful. ComprehensiveBy M. DehganThis book is an exceptional resourse for the practicing clinician working with the traumatic brain injury and spinal cord injury populations who have dysphagia. It addresses current research available in both the US and Australia. Some clinicial decision making is slightly different between the two countries, but this is likely due to practice guidelines.

Dysphagia Post Trauma by is a premier book in the Clinical Dysphagia Series. The authors are world renown for their research and clinical insights into the often-challenging patterns of dysphagia caused by a variety of traumatic conditions. This book, like all the books in this series, is written with the practicing clinician in mind. Traumatic brain injury and all other traumatic injuries that influence swallowing are described. The emphasis on evaluation and treatment is described so clearly and thoroughly that a clinician can review relevant chapters and then confidently approach the bedside of even the most complicated patient. This is the one critical swallowing book for those clinicians with traumatically injured men, women, and children on their caseloads.

Lindsay Lanciault, MA (Doctor's Community Hospital), Doody's Service, (2010): "The book excels at providing clear and concise information. The tables outline useful information and are easy to access for quick reference. Several useful diagrams and images also enhance the text. ... This is a valuable addition to the resource library of any SLP who works in an acute care facility, specifically one who works in a tertiary care facility where trauma patients make up the majority of the caseload. It provides relevant information and a highly accessible format." Alison Davison, Speech and Language Therapy in Practice, (2010): "I thoroughly enjoyed this book, and would highly recommend it for departments with a trauma caseload." Patrick Bradley, MBA, FRCS, ENT Audiology News, (2010): "... Well written and easy to read. ... Aimed at speech and language therapists, but should be read by all members of the rehabilitation team involved in the long-term management of trauma patients. A good buy and value for money!" Catriona M. Steele, PhD, Canadian Journal of Speech-Language Pathology and Audiology, (2010): "Chapter 4 is another highlight on a topic that has received too little attention in our literature: dysphagia following burn injuries. Here, we are treated to Anna Rumbach's superb work in the area. ... The book is written in user-friendly language, with excellent illustrations, and will prove a useful resource to any clinicians working in this area."About the AuthorElizabeth Ward, Ph.D. Elizabeth C. Ward, PhD, is an Associate Professor in the Division of Speech Pathology at the University of Queensland, Australia Angela Morgan, BSpAud(Hons), Ph.D. Angela Morgan is currently a research fellow at the Murdoch Childrens Research Institute, Royal Childrens Hospital and University of Melbourne, Melbourne, Australia.
