By Hammer Tide Positives: With a background of Nursing School Training, Emergency Medical Technician, and on-the-job training as an Emergency Room Technician, actively working, I would say that this textbook has a hint of awesome. I wouldn't consider it to be a complete training tool alone, as some nursing assistant books are very large and go into great detail, this textbook covers an almost bullet-point, concise, need to know format in paragraph, image, and chart form, that seeks to pull your prior knowledge or experience in the field and of medical terminology. Past experience or other resources will definitely guide you with their 10-pages-or-less chapters and resourced information

to assist the nurse, physician, nurse practitioner, physician assistant, and other healthcare personnel appropriately. This text has served my needs and I am especially happy with the refresher knowledge on Peak Expiratory Flow Meter, Major Abnormal EKGs, Brain Spinal Cord, Diagnostic Peritoneal Lavage, Genitourinary System, Burns, Visual Acuity, Morgan Lens, Blunt Eye Trauma, Epistaxis, Micro Collection Tubes, Radiation, and Decontamination.

This one-of-a-kind text, directed at nursing staff development, is an excellent resource for facilities to use to develop their unlicensed personnel into emergency care technicians. Suitable for both in-house staff development courses and stand-alone training programs, this text touches upon every aspect of working in the emergency department, from the essential communication skills needed, to the medical techniques practiced, and even the safety and legal issues that might arise.
