Definitely necessary for anyone living within five miles of a hazmat area. That would be just about anywhere that has an Interstate or railroad tracks within your area because these are major arteries for transport of such materials. Should be part of a complete medical kit for situational evaluation of hazmat dangers.1 of 1 people found the following review helpful. A must HaveBy Jose R. BaezaIf you are into emergency response or a first responder don't leave home without it. More and more these days we face the peril of becoming victims ourselves in responding to a emergency scenario.Haz mats are everywhere and we need to be aware of the dangers they pose to us.DO NOT go into a scene without doing size-up including the possibilities of hazardous material in the scene. If you do not have proper PPE do not go in. Actually help in the process of denying access till proper personell with the proper PPE get on scene.Following the guidebook response instructions is imperative to your safety and to the general public safety.The guide is easy to use self explanatoty and a indispensable tool in how we respond to the hazard of often perilious or toxic substances.0 of 0 people found the following review helpful. IN CASE OF EMERGENCY...By Kennyh\_87I feel prepared to assist if anything were to happen around here. It is in my truck if I ever need it! I love it! Many thanks to the seller!
