Elsevier should reconsider their plan not to supply a DVD/cd with the book as now one has to connect to Internet to get the content. On top of this, their servers are not fast enough resulting in relatively long time for the video to buffer. 0 of 0 people found the following review helpful. The online expert consult completely justifies the book price By Fuccio Lorenzo A very useful textbook in particular I've really appreciated the online expert consult, with many videos and some of them with narration; the only limitation is that not ALL videos are with narration; however the text is very clear. 0 of 0 people found the following review helpful. EUS BOOK REVIEW By krishnaveni The revised and updated second edition encompasses the entire spectrum of EUS

from basic principles of ultrasound to advanced interventional techniques .The editors have to be lauded for their painstaking effort to include every aspect of endosonography and the contents are contributed by authorities from all over the world. The initial chapters give a guidance on setting up an EUS service,and a detailed description of equipment and accessories available. The how to perform EUS in various stations are a step by step guide to the beginner and are wonderfully complemented by the videos.The descriptive staging of carcinomas are emphasised with beautiful images. EUS based algorithms are an informative new addition and therapeutic section has been expanded with superb videos. The digital version with regular updates is a thoughtful and novel idea . The chapter on cytology with illustrations ,tips on increasing yield and colourful stained images evokes lot of interest.I would like to recommend it as a must have book for every endosonographer.

"This book is valuable for all levels of EUS training. There are other EUS introductory books, but this one strikes a nice balance between presenting basic technique and providing a wide-ranging discussion of diagnostic evaluation and advanced intervention. The online features have made this book one of my primary references during my EUS training." - Joseph Auer, AB, MM, MD (University of Kentucky College of Medicine) 4 star Doody rating!
