Five StarsBy Harvey BankThis book is an academic exposition of the strengths and weaknesses of both Applied Kinesology Vs Energetic Kinesiology. It carefully dissects and discusses the underling assumptions and explains practical approaches in the context of published research. This book is not for the therapist who simply wants to push on a muscle in a given position and direction to determine if it is strong or weak. It moves the entire field from a follow a formula approach to a deep understanding of the complexities of the subconscious nervous system, conscious control of the nervous system, detailed muscle and proprioceptive physiology, therapist/client interaction, and the interaction of all these

parameters. This is a well written and well researched book.

This comprehensive, fully referenced text aims to provide a foundation statement on energetic kinesiology in order to bring greater coherence to both its theory and practice.
