Alan J. Silman, Gary J. Macfarlane : Epidemiological Studies: A Practical Guide before purchasing it in order to gage whether or not it would be worth my time, and all praised Epidemiological Studies: A Practical Guide:

Following on in the footsteps of its acclaimed and popular predecessor, this new edition builds on the successful features that engaged readers of the first edition: it explains the principles and practice of epidemiology and serves as a handbook for those who wish to do epidemiology; it uses relevant exercises and examples, taken from real life, to illustrate how to set up a study; it aims to help produce valid results that will satisfy grant bodies, ethical committees,

and journal editors; ultimately it bridges the gap between theory and practice. This edition includes numerous improvements and several new chapters which will further enhance its appeal.

"...this is a useful book for those embarking on their first epidemiological study (or for those wishing to avoid the problems they had the last time!), as well as an improvement on the first edition." *Public Health* "...gems peppered throughout...useful..." *International Journal of Epidemiology*"This is not a general epidemiology textbook. It accomplishes exactly what the title suggests.... The descriptions of statistical analysis, especially the importance of confidence intervals, are presented with unusual clarity. The topics chosen throughout are relevant, important, and explained well.... [The authors] skillfully use brief examples throughout the text to explain and clarify the subject matter being addressed. This is a major strength of the book.... *Epidemiological Studies* accomplishes its stated purpose of providing information to help readers write better grants and avoid common mistakes when planning and carrying out epidemiological studies. It stimulates thinking about major issues such as study design and cost. It effectively discusses some of the ethical issues that must be considered when designing studies. Students and most experienced researchers will benefit from reading this clearly written book." *The Quarterly of Biology*

About the Author Professor Silman is Director of the internationally renowned Arthritis Research Campaign's Epidemiology Research Unit and has considerable expertise in all aspects of epidemiological studies. He has achieved worldwide recognition in this field, has published over 300 papers and lectured widely. In addition he has taught on several courses on epidemiological methods and analysis both for those starting out research and those at a more advanced level. He is currently Vice Chairman of the Epidemiology and Health Sciences Research sub-panel for the United Kingdom's University research assessment exercise. DOB: 4.12.51. Professor Macfarlane holds the Chair in Epidemiology within the School of Epidemiology and Health Sciences at the University of Manchester. He was previously Senior Lecturer within the Arthritis Research Campaign's Epidemiology Unit also at the University of Manchester and Deputy Director of the Division of Epidemiology and Biostatistics at the European Institute of Oncology in Milan. He has authored approximately 100 peer-reviewed scientific articles, book chapters and reviews. He has lectured widely on Chronic Disease Epidemiology and taught on several courses.
