Leon Gordis MD MPH DrPH : Epidemiology, 2e before purchasing it in order to gage whether or not it would be worth my time, and all praised Epidemiology, 2e:

0 of 0 people found the following review helpful. Great acquisition! I'm very happy with this bookBy Leticia Ali Figueiredo FerreiraGreat acquisition!I'm very happy with this book! It was really cheap! For those who don't have so much money to buy a new edition I highly recommend it! It has the same content of the new version!0 of 0 people found the following review helpful. Excellent bookBy JoeTI think that this is a good book overall.Good examples and the text is easy to read.However, it's still not as good as my standard: Jekel's Epidemiology, Biostatistics, Preventive Medicine and Public Health.If you have the opportunity to review both, do it before you buy either one.0 of 0 people found the following review helpful. great costBy O'Leo L.Hey got this book for my MPH programe -it is a must for

the course and was worth it...good condition -I was impressed

The 2nd Edition of Epidemiology teaches the basic principles and methods of epidemiology in an understandable and interesting manner. Both the underlying concepts as well as the practical uses of epidemiology in both public health and clinical practice are emphasized. The book is organized into three sections: Section One focuses on the epidemiologic approach to assessing the extent and severity of disease in the community. Section Two deals with using epidemiology to identify the causes of disease. Section Three discusses the use of epidemiology for evaluating health services and screening programs. Many of the diagrams and illustrations have been developed by the author in over 20 years of professional practice.

The book by Gordis has become my overall favourite as a first serious textbook in epidemiology; it is ideal for the master's level entrant and has a great deal of material suitable for the undergraduate. -- Journal of Epidemiology and Community Health
About the Author Leon Gordis, MD , Professor, Department of Epidemiology, School of Hygiene and Public Health, Johns Hopkins University.
