Here is the first text for veterinarians and farrier's that focuses exclusively on the foot. The foot is the most common site of lameness in horses and it is estimated that seventy to eighty percent of lameness problems are foot-related. It covers the basic farrier principles, but also focuses on medical and surgical foot care management. Starting with the

anatomy and physiology of the equine foot, the book moves on to evaluation of the equine foot; pathological conditions; balancing and shoeing the healthy and diseased equine hoof and finally ends on new direction in equine podiatry. Written by and for both veterinarians and farriers, this book makes it easier for veterinarians and farriers to collaborate on the proper care and shoeing of the horse's foot. Text is devoted entirely to equine podiatry with 70 percent to 80 percent of lameness problems involving the foot, this comprehensive discussion is invaluable to the equine practitioner. Highly respected and qualified authors from all over the world provide expert information, along with a chapter on the future of equine podiatry. Beautiful 4-color design and art program gives the reader helpful visual aids that clarify explanations in the text.
