1 of 1 people found the following review helpful. why new is not the same as usedBy H. suhrburThis is a magnificent book for the optic professional and will most likely be on you shelf and referred to for the duration of your career. I highly recommend this book if you are an optician or if you are training to be an optician.The reason the new version is so much more costly than the used version is the lens cutting templates kit that come with the new version. They are worth more than the book and buying the book used without the kit is not getting the same value, especially if you are an optician training to cut lenses.

A must for anyone who is currently doing lens edging, or is thinking of adding a lens finishing lab to their practice. This book takes the reader through a step-by-step understanding of lens edging, beginning with the basics and building to an advanced level. Highly readable and packed with instructional photos and drawings, this book also features a separate kit for practicing lens edging layout at home. Proficiency tests for self-assessment are included for each chapter and will be an excellent review for examinations.
