Institute of Medicine, Medical Follow-up Agency, Committee on Noise-Induced Hearing Loss and Tinnitus Associated with Military Service from World War II to the Present : Noise and Military Service: Implications for Hearing Loss and Tinnitus before purchasing it in order to gage whether or not it would be worth my time, and all praised Noise and Military Service: Implications for Hearing Loss and Tinnitus:

0 of 0 people found the following review helpful. Very good book. It's a little bit sad that the ...By James HoustonVery good book. It's a little bit sad that the work was commissioned by Congress in order to find ways to help the VA deny claims for service connected hearing tinnitus. So the VA can continue the Thee D's - Delay, Denial, wait til you Die. It's amazing that when you fight for your country you have worth but when they try to put you back together you are just a cost center or an ENTITLEMENT or a welfare king or queen. I was wounded twice in Vietnam and have 100% total and permanent disability through the VA so I guess I'm a welfare king. It might be noted that there are fewer and fewer congressmen women that have ever served in the military. The greatest generation of WW II is gone which is sad.0 of 0 people found the following review helpful. Packed with the FactsBy cobblestickThis book was essential when filing my appeal with the Veteran's Administration.0 of 0 people found the following review helpful. US Department of Veteran AffairsBy GunnerIf you work as a Veteran Service Officer, representing vets in claims against the VA, and you don't have this book in your reference library, get it! The only book I use more than this is 38 CFR. With this book I have 90% success rate on hearing loss and tinnitus claims.

The Institute of Medicine carried out a study mandated by Congress and sponsored by the Department of Veterans Affairs to provide an assessment of several issues related to noise-induced hearing loss and tinnitus associated with service in the Armed Forces since World War II. The resulting book, *Noise and Military Service: Implications for Hearing Loss and Tinnitus*, presents findings on the presence of hazardous noise in military settings, levels of noise exposure necessary to cause hearing loss or tinnitus, risk factors for noise-induced hearing loss and tinnitus, the timing of the effects of noise exposure on hearing, and the adequacy of military hearing conservation programs and audiometric testing. The book stresses the importance of conducting hearing tests (audiograms) at the beginning and end of military service for all military personnel and recommends several steps aimed at improving the military services prevention of and surveillance for hearing loss and tinnitus. The book also identifies research needs, emphasizing topics specifically related to military service.
