Sharon K. Zoumbaris : Nutrition (Health and Medical Issues Today) before purchasing it in order to gage whether or not it would be worth my time, and all praised Nutrition (Health and Medical Issues Today):

Nutrition addresses the most hotly debated topics in the news today: obesity, food safety, irradiation, and

vegetarianism and also describes the currently accepted principles of good nutrition for men, women, and children. 10 illustrations; Primary documents provide students with resources for further study

"This reference for students in high school and up addresses seven controversial issues in nutrition: food irradiation, genetically modified food, vitamins and supplements, vegetarianism, organic food, food safety, and bans on fast food and junk food. Background chapters give a brief history of the study of nutrition and the future of nutrigenomics, outline basic principles of nutrition, and explain currently accepted principles of good nutrition for men, women, and children. A section of references and resources includes annotated primary source documents, a nutrition timeline, a directory of organizations, and a glossary. A few BW photos are also included." - SciTech Book News
"This guide gives non-biased answers to the questions of nutrition-related issues. . . . This volume is a good basic source for high school and older students as well as the general public who are interested in nutrition issues and the libraries that serve these readers." - ARBAonline
"Recommended. First-year students and general readers." - Choice
About the Author
Sharon Zoumbaris is an independent scholar. Her published works include Greenwood's Encyclopedia of Diet Fads with Marjolijn Bijlefeld.
