Ferenc Kuhn, Dante J. Pieramici : Ocular Trauma: Principles and Practice before purchasing it in order to gauge whether or not it would be worth my time, and all praised Ocular Trauma: Principles and Practice:

Ocular Trauma: Principles and Practice is the first comprehensive clinical reference on ocular injuries in more than a decade. Each chapter gives you detailed instructions on evaluation, treatment, and management, including "what to do", "how to do it", and "why to do it." You'll also learn techniques for developing individualized treatment strategies for hard-to-identify injuries. The book begins with general terminology and classification of ocular trauma, and goes on to cover such topics as: the new role of endoscopy; eye restoration with complete iris loss; anterior chamber disorders; rehabilitation advances; medicolegal issues regarding the ophthalmologist as an expert witness; and much more! Insightful chapters written by patients offer their perspectives on the physical injuries and emotional trauma

they have experienced. Key features of *Ocular Trauma: A systemic approach to eye management on a "tissue by tissue" basis*, instead of the traditional anterior/posterior approach Practical, easy-to-use format, featuring more than 350 illustrations (156 in full color), pearls, pitfalls, bullets, and special considerations, ideal for daily practice An international panel of expert authors offering up-to-date global perspectives on management of ocular trauma Draws on the largest epidemiologic and clinical data collection available, The United States Eye Injury Registry Offers an important discussion of medicolegal issues facing ophthalmologists called as expert witnesses Provides a comprehensive list of common abbreviations and frequently used terms and more! This reader-friendly book is a valuable addition to the professional library of every ophthalmologist, retina specialist, resident, and emergency room physician who deals with trauma patients. No other resource gives you such an abundance of information on assessment, emergency intervention, management, and rehabilitation. Make sure you have the best, state-of-the-art information as you treat patients who have suffered an ocular injury.
