**From CABI : One Health: The Theory and Practice of Integrated Health Approaches** before purchasing it in order to gage whether or not it would be worth my time, and all praised One Health: The Theory and Practice of Integrated Health Approaches:

With contributions from international authors in the fields of veterinary and animal science, epidemiology,

environmental science, tropical medicine, and public health, One Health synthesizes the central elements of current OH research and practice in one broad-ranging volume. It includes extensive information about zoonotic diseases with discussions of diseases of wildlife, farm animals, domestic pets, and humans. Also covered are real-world considerations sanitation, economics, food security, and evaluations of the success of vaccination programs. One Health also discusses approaches to putting OH policy into practice and positive aspects of OH including the human-animal bond. Case studies are widely used throughout as well as textbox summaries, best practice examples, and emergency protocols.

About the Author Jakob Zinsstag is at the Swiss Tropical and Public Health Institute, Switzerland. Esther Schelling is at the Swiss Tropical and Public Health Institute, Switzerland. Maxine Whittaker teaches at the University of Queensland, Australia. Marcel Tanner is at the Swiss Tropical and Public Health Institute, Switzerland. David Waltner-Toews is at the Swiss Tropical and Public Health Institute, Switzerland.
