Stanley Hatch OD MPH FAAO Diplomate Public Health : Ophthalmic Research Epidemiology: Evaluation and Application, 1e before purchasing it in order to gauge whether or not it would be worth my time, and all praised

Ophthalmic Research Epidemiology: Evaluation and Application, 1e:

Ophthalmic Research and Epidemiology is the ultimate "how-to" text for designing and implementing a clinical research study. Both students and practitioners will use this guide as a valuable reference at all stages of project development and analysis. The first section utilizes classic research studies in ophthalmology and optometry to emphasize the benefits of strong research. The second section applies the fundamental principles of epidemiology to eye care with a case study method on glaucoma screening. The third section details the design and implementation of a research study. The final section shows how to apply epidemiologic principles in vision screening and survey research. Provides the tools necessary for reading, designing, and executing ophthalmic research Explains most common statistical methods simply and briefly Includes a self-assessment quiz with each chapter and an entire section on screening
