S. Abeyasinghe : Pandemics, Science and Policy: H1N1 and the World Health Organisation (Palgrave Studies in Science, Knowledge and Policy) before purchasing it in order to gage whether or not it would be worth my time, and all praised Pandemics, Science and Policy: H1N1 and the World Health Organisation (Palgrave Studies in Science,

Knowledge and Policy):

Pandemics, Science and Policy analyses the World Health Organisation's (WHO) management of the 2009 H1N1 Pandemic. Abeyasinghe illustrates the ways in which the WHO's account was vulnerable to contestation, and ultimately how uncertain risks can affect policy and action on the global level.

Tightly argued from sociological theory, the book, part of the Palgrave Studies in Science, Knowledge and Policy series, will appeal to sociologists of global health and global health policy. Summing Up: Recommended. Upper-division undergraduates through researchers/faculty. (T. P. Garipey, *Choice*, Vol. 53 (6), February, 2016) About the Author Sudeepa Abeyasinghe is a Lecturer in Global Health Policy in the School of Social and Political Science, University of Edinburgh, UK.
