B.B.Singh Dhaliwal, Prayag Dutt Juyal : Parasitic Zoonoses before purchasing it in order to gage whether or not it would be worth my time, and all praised Parasitic Zoonoses:

The book Parasitic Zoonoses emphasizes a veterinary and public health perspective of zoonotic parasites. This book is suitable for higher undergraduate and graduate students of zoonoses and public health, veterinary parasitology, parasite epidemiology; public health workers; public health veterinarians; field veterinarians, medical professionals and all others interested in the subject. More than 15 protozoa and 50 other parasitic diseases are zoonotic in nature and all these diseases have been discussed in detail. The first chapter is concerned with classification of zoonotic

parasites, food borne, vector borne and occupation related zoonotic parasites. The remaining chapters cover etiology, epidemiology, life cycle, transmission, clinical signs, diagnosis, prevention and control of zoonotic parasites. The text is illustrated with a large number of coloured figures. An alphabetical bibliography for every disease has also been included so that readers have access to further information.

From the reviews: This excellent reference on parasitic zoonoses would make a nice addition to the libraries of veterinarians and public health workers as well as students, both at the undergraduate and graduate levels. The audience includes those involved in animal and public health including veterinarians, parasitologists, medical doctors, public health officials, and students. This is a well-written book that presents accurate information with appropriate references to the current literature. A number of diagrams make it easy to following the parasites lifecycle. (Adam Stern, Doodys Book s, November, 2013)

From the Back Cover The book *Parasitic Zoonoses* emphasizes a veterinary and public health perspective of zoonotic parasites. This book is suitable for higher undergraduate and graduate students of zoonoses and public health, veterinary parasitology, parasite epidemiology; public health workers; public health veterinarians; field veterinarians, medical professionals and all others interested in the subject. More than 15 protozoa and 50 other parasitic diseases are zoonotic in nature and all these diseases have been discussed in detail. The first chapter is concerned with classification of zoonotic parasites, food borne, vector borne and occupation related zoonotic parasites. The remaining chapters cover etiology, epidemiology, life cycle, transmission, clinical signs, diagnosis, prevention and control of zoonotic parasites. The text is illustrated with a large number of coloured figures. An alphabetical bibliography for every disease has also been included so that readers have access to further information.

About the Author Dr. Balbir Bagicha Singh Dhaliwal (Ph. D) is working as Assistant Professor (Veterinary Public Health) with Guru Angad Dev Veterinary Animal Sciences Universitys School of Public Health Zoonoses (Ludhiana, India). He is working in the field of Food Borne Zoonotic Parasitology since last 13 years. He is recipient of Dr. V. S. Alwar memorial award (2004), The Flemish Vlaamse Interuniversitaire Raad University Development Corporation (VLIR UOS) grant (2007) and World Association for Advancement of Veterinary Parasitology Scholarship funding (2013). Dr. P.D. Juyal served at RAU, Pusa (Bihar), GBPUT, Pantnagar and PAU, Ludhiana and as Professor and Head Department of Veterinary Parasitology at Guru Angad Dev Veterinary Animal Sciences University, Ludhiana (India). Presently, Dr. Juyal is working as Registrar, GADVASU, Ludhiana (India). He has published more than 189 research and extension papers and six practical manuals for UG students. He is recipient of Prof. B.V. Rao Gold Medal (1998) and Prof. V.S. Alwar Memorial Award (2004) for research publications in journals.
